ACSnet -
transparency and traceability in your production

ACSnet

ACSnet is an easy to grasp management system for use in the poultry sector. The system is very illustrative in design and gives a good overview in the daily work routines. The system brings security to your organization because each person is only allowed access to the system in accordance with qualifications.

Tailor-made solutions

ACSnet can be tailor-made to each user in the organization so that they have a personal password that needs to be entered to get access to ACSnet. Via this password the system automatically defines the platform for the user - preferred language and level of access to the ACS controllers. This ensures simplicity in operation and allows for each person to "grow" with the system. As each user becomes acquainted with the system, new access levels can be defined that allow further accessibility to the system.

Multiple users

Via the ACSnet software you have access to all ACS controllers in the network, and from here you can distribute and collect data within this network. If the network is connected to internet you will naturally be able to connect to the system anywhere internet is accessible. Multiple users can work on the system at the same time, and since the ACS controllers work with up to 16 different languages simultaneously, the system is accessible for nearly everybody who has security clearance. This brings transparency and safety on all levels within the organization.

Data security and traceability

All alarms and relevant process data are automatically logged in a database and information can be collected any time for further analysis. From this information all authorized persons will be able to trace all events that are related to the production. This brings safety to the production and simplifies communication between the employees in the production, technicians and people from the administration.

ACSnet in short

- ACSnet is a tool for daily management.
- ACSnet is a performance and benchmarking tool.
- All buildings connected to ACSnet server via ACS6 controllers.
- Free update of new software for ACS6 controllers.
- Free software license for ACSnet.
- Free client license for ACSnet.
- Free database license.
- Integration of production data to ERP.
- On-line training and support via internet.
- Advanced feed management water/feed ratio, FCR, EPEF.
