
Winterizing wall fans the smart way!

Fully automated MagDoors installed in a modern UK broiler shed.

Just above freezing point outside, and birds rest comfortably right underneath the doors.

No condensation, no cold air ingress and no restrictions to airflow when fans are running.

A hygienic, sturdy and easy to clean unit which can be power washed.

The MagDoor bolts onto the interior wall and hence can be retrofitted and used not just on

our MagFan but also on other fans, as an air intake and a completely airtight tunnel door.

**Now take a look at the other
end of that same shed**

Bone dry litter and sparkling clean air throughout the house thanks to the patented Corona inlet fans. No cables to adjust, no leaky minivents, and a much lower energy consumption.

Across the globe, our customers experience superior in-house climate, much improved litter quality and huge reductions in heating costs and electricity bills with our durable, well designed products.
