

***"DACs have a vast knowledge which they are always willing to share"***

*Mr. Robin Spooner*

*Mr. Nick Spooner*

**BPS Equipment is a family-run business delivering complete, high-performance equipment solutions to the UK poultry industry. BPS have worked closely with DACS for nearly 20 years and have supplied numerous DACS ventilation systems during this time.**

### **Excellent crop of chickens**

"We first recognized the potential of the DACS system when we visited a project they had completed in Romania. There, we saw how the DACS ventilation system successfully managed very demanding summer temperatures. Despite these conditions, the farm produced an excellent crop of chickens. We felt that if this system were placed in the hands of an experienced UK manager, it would be a winning combination. Many years later, this has clearly proven to be the case," says BPS owner, Robin Spooner.

### **Outstanding welfare benefits**

"Farming customers who have purchased a DACS system from BPS have consistently been very satisfied. They highlight the comprehensive ventilation and production control the system delivers, the user-friendly ACS6 controller with its familiar Windows-based screens and clear language, and the outstanding welfare benefits demonstrated by excellent litter conditions and the near-elimination of hook and Podo problems," says General Manager Nick Spooner.

### **Repeat business**

"There is a strong market for DACS in the UK, and we foresee many more projects adopting the system. We are particularly encouraged by increasing repeat business, with customers returning to us for their next projects. Farmers consistently cite the superior conditioning of incoming air provided by the Corona air inlets, along with the ease of operation of the complete DACS climate and production control package, as key reasons for choosing DACS," Nick Spooner points out.

### **Friends and business partners**

"DACs have always supported BPS from the early planning and quotation stages through to commissioning and ongoing technical support during production. Their team has extensive expertise which they are always willing to share, and they are available whenever needed, even during weekends and holidays. We are extremely pleased with the close cooperation we receive from the entire DACS team, and the Dybdahl family have been a pleasure to work with, becoming valued friends as well as trusted business partners," Robin Spooner rounds off.
